Professional Summary

Network and IT infrastructure professional pursuing an M.S. in Computer Engineering with a specialization in Networks & Cybersecurity at CSUF graduating December 2026. CompTIA Network+ and Oracle Cloud Infrastructure Certified Networking Professional with hands-on experience in NOC/data center operations, network and server monitoring, TCP/IP troubleshooting, ServiceNow incident management, alert triage, and technical escalation. Seeking Network Engineer, NOC, Network Support, or IT Infrastructure roles.

Certifications

- CompTIA Network+ (N10-009) 2026
- Oracle Cloud Infrastructure Certified Networking Professional 2025

Technical Skills

Networking	TCP/IP, DNS, DHCP, VLANs, Subnetting, NAT, ACLs, LAN/WAN, Ethernet, Wi-Fi, Static Routing, OSPF, BGP Fundamentals
Infrastructure & Operations	Network/Server Monitoring, NOC Operations, Network Racks, Rack Mounting, Cabling, Asset Management
Tools	OpManager, Schneider Data Center Expert, ServiceNow, Wireshark, Packet Tracer, GNS3, Ping, Traceroute, Nslookup, Alert Triage, Escalation
Security	Firewalls, VPN, MFA, Network Hardening, Access Control, Incident Response, Physical Security
Systems	Linux (Ubuntu), Windows Server | **Languages:** Python, Java, C

Professional Experience

Data Center IT Student Assistant | *Division of Information Technology, CSUF* *Jun 2026 – Present*

- Monitor production university data center infrastructure and a remote facility using ManageEngine OpManager and Schneider Data Center Expert, triaging server, network interface, UPS, cooling, and infrastructure alarms and escalating critical incidents to Tier-2/on-call personnel.
- Conduct hourly data center walkthroughs inspecting 6 CRAH cooling units, 10 electrical panels, fire/smoke systems, and server/network racks for alarms, abnormal temperatures, and hardware fault indicators; document incidents in ServiceNow for resolution.
- Create, document, and route ServiceNow incidents using appropriate categories, impact/urgency levels, and assignment groups; provide after-hours help desk support and escalate critical service, network, wireless, power, and facility incidents.
- Enforce physical and data access controls by restricting master-key checkout to authorized IT staff, documenting every checkout and return by email, and operating a Ring intrusion and flood alarm system across 3 security modes, in line with Information Security Officer (ISO) policies.

Customer Service Associate (Network & Connectivity Support) | *Firstsource Solutions* *Feb 2024 – Dec 2024*

- Provided Level-1 network and connectivity support across 20–22 daily customer incidents, troubleshooting Wi-Fi, broadband, router, Ethernet, and Sky Q connectivity issues through structured remote diagnostics.
- Diagnosed LAN/WLAN and TCP/IP connectivity issues, including IP address acquisition failures, intermittent wireless connectivity, router communication issues, and loss of connectivity between customer devices and broadband gateways.
- Applied TCP/IP, DHCP, IP addressing, LAN, WLAN, Ethernet, and router troubleshooting concepts to isolate faults across customer-premises equipment, network connections, and Sky devices.
- Performed fault isolation, incident documentation, and technical escalation, recording symptoms, diagnostic actions, and resolutions while escalating unresolved broadband, network, and equipment issues to higher-tier support teams.

Software Development Intern | *Kodnest* *Jun 2023 – Dec 2023*

- Developed full-stack applications using Java, Spring Boot, Python, and Django, gaining hands-on experience with client-server architecture, REST APIs, and application communication.
- Executed 50+ functional and system test cases to validate application behavior, reliability, and client-server interactions.

Key Projects

ML-Based Network Intrusion Detection System | *Python, CICIDS2017, Scikit-learn, XGBoost, Flask, Network Security*

- Developing an ML-based NIDS using CICIDS2017 network-flow data to detect DDoS, DoS, brute-force, web, and port-scan attacks.
- Training and comparing Decision Tree, Random Forest, and XGBoost models using precision, recall, F1-score, AUC-ROC, and 5-fold cross-validation.

Secure Chat Application | *Python, TCP/IP sockets, Client-Server Networking, FTP*

- Developed a Python TCP/IP client-server application using socket programming, configuring host/IP addressing, port binding, listening, connection establishment, and multi-client communication.
- Implemented multithreaded network communication with concurrent send/receive operations; designed the server to accept client connections, route messages, and maintain active user sessions.
- Secured client-server communication using symmetric encryption and supported FTP-based file sharing, group messaging, connection management, and file transfers up to 1 MB.

Smart Garbage Monitoring System | *IoT, ESP8266, Wi-Fi, GSM, TCP/IP, Python*

- Configured an ESP8266 Wi-Fi module using TCP/IP communication to transmit sensor data from embedded devices to a centralized web server.
- Integrated multiple IoT sensor nodes using Wi-Fi and GSM communication, enabling distributed device connectivity and centralized monitoring.

Education

Master of Science — Computer Engineering *Jan 2025 – Dec 2026*
California State University Fullerton (CSUF), California, USA *Specialization: Networks & Cybersecurity*

Bachelor of Engineering — Electronics & Communication Engineering *Aug 2019 – Aug 2023*
B.N.M Institute of Technology, Bengaluru, India

Publications

IEEE: *Smart Waste Segregation System* — 2024 International Conference on IITCEE | `ieeexplore.ieee.org/document/10467618`
