Professional Summary

Network and Cybersecurity support professional pursuing an MS in Computer Engineering (Networks & Cybersecurity specialization) at CSUF, graduating December 2026. Oracle Cloud Infrastructure Certified Networking Professional and CompTIA Network+ Certified, with hands-on experience in TCP/IP, VPN, DNS, DHCP, firewall configuration, and LAN/WAN troubleshooting through enterprise technical support and university data center operations. Seeking Full-Time roles in Network Operations, IT Support, or Cybersecurity.

Certifications

- Oracle Cloud Infrastructure Certified Networking Professional 2025
- CompTIA Network+ (N10-009) 2026

Technical Skills

Networking	TCP/IP, DNS, DHCP, VLANs, Subnetting, NAT, ACLs, Network Segmentation, Monitoring, Environmental Monitoring Systems
Security	Firewalls, VPNs, MFA, Encryption, Network Hardening, Incident Response, SNMP, Syslog, Information Security Officer (ISO) compliance, Level 1 Data Access Controls, Physical Security Compliance
Tools	Wireshark, Cisco Packet Tracer, GNS3, VirtualBox, Ping, Traceroute, Nslookup, Packet Analysis, Service Now
IT Support	Troubleshooting, Incident Management, Documentation, Asset Management, IT Ticketing Systems, Shift Reporting, Escalation Procedures
OS	Linux (Ubuntu), Windows Server	**Languages:** Python, Java, C

Professional Experience

Data Center Student Assistant | *CSUF — Division of Information Technology* *Jun 2026 – Present*

- Monitor servers, network hardware, and environmental systems across the university production data center, conducting hourly walkthroughs to identify and log incidents via IT ticketing system (ServiceNow), with end-of-shift reports escalated to senior IT personnel.
- Maintain up-to-date records for all hardware and infrastructure assets across the data center, supporting inventory accuracy and operational compliance.
- Work as per Information Security Officer (ISO) policies, following Level 1 security data and data center access policies, assisting IT personnel in emergency situations and infrastructure projects.

Customer Service Associate (Network & Connectivity Support) | *Firstsource Solutions* *Feb 2024 – Dec 2024*

- Resolved 10–20 tickets per day involving TCP/IP, VPN, DNS/DHCP, and LAN/WAN problems with an efficiency rate of approximately 70–75% first contact resolution on a team of 10–25 technical support agents.
- Performed direct router, switch, and firewall configuration, as well as packet analysis using tools such as Wireshark, PuTTY, and Linux CLI.
- Maintained performance dashboards to ensure optimal network operations while reporting Tier-2 incidents based on root cause analysis.
- Employed a methodical OSI model approach in troubleshooting VPN tunneling failures, internet connectivity problems, and TCP/IP stack related issues.

Software Development Intern | *Kodnest* *Jun 2023 – Dec 2023*

- Built and deployed 3+ full-stack applications using Java (Spring Boot) and Python (Django), gaining hands-on experience with client-server architecture and REST API communication.
- Designed and executed 50+ structured test cases for system reliability validation across application environments.

Key Projects

Secure Chat Application | *Python, TCP/IP Socket Programming, FTP, PyCharm*

- Architected a client-server network application using TCP/IP socket programming with three-way handshake connection establishment, socket binding, port configuration, and multi-client session management.
- Applied network security principles including end-to-end encryption, authenticated FTP file transfer, and data integrity verification directly mirroring enterprise secure communication protocols.
- Supplemented practical troubleshooting experience with hands-on lab simulations using Cisco Packet Tracer and GNS3, building and testing LAN/WAN topologies and routing configurations.

Smart Garbage Monitoring System | *IoT, Arduino, GSM/Wi-Fi, ESP8266, Python* | **IEEE Published**

- Configured ESP8266 Wi-Fi module with integrated TCP/IP protocol stack for microcontroller-to-web-server communication; implemented dual-channel wireless communication (GSM 900/1800 MHz + Wi-Fi) for network redundancy.
- Integrated multiple sensor nodes into a unified IoT network architecture managing device-to-device communication and data routing to a central web server.

Education

Master of Science — Computer Engineering *Jan 2025 – Dec 2026*
California State University Fullerton (CSUF), California, USA *Specialization: Networks & Cybersecurity*

Bachelor of Engineering — Electronics & Communication Engineering *Aug 2019 – Aug 2023*
B.N.M Institute of Technology, Bengaluru, India

Publications

IEEE: *Smart Waste Segregation System* — 2024 International Conference on IITCEE | `ieeexplore.ieee.org/document/10467618`
